

Professional Services

NetBackup™ Environment Assessment.

Optimize Your Data Protection Environment

Consistent information protection and recovery is a critical element of operations resiliency. A deep understanding of production data protection environments, along with a system-level analysis is necessary to maintain service levels. But evolving user needs and rapid IT evolution demands attention towards modernizing that environment to meet recovery and resiliency requirements now and in the future. Appropriately balancing between maintenance and modernization is essential to achieving predictable success over time.

Veritas NetBackup™ Environment Assessment balances these perspectives to provide an independent and holistic backup and recovery environment assessment and provide constructive recommendations which inform customers on how to enhance performance and prepare for modernization. Guided by data protection and management stakeholder goals and requirements and end-to-end environment analysis—our consultants identify capabilities and challenges and provide recommendations to:

- Quickly improve performance
- Better apply advanced NetBackup features and functions
- Improve utilization and reduce costs
- Guide modernization planning

Are you Looking to:

Improve Backup Performance

- Low success rates
- Long backup and restore windows

Modernize Data Protection

- Agentless VMware backup and disaster recovery
- Cloud integration
- APIs and automation
- Modern workloads

Update Technology Platforms

- Server and Appliance refresh
- Disk, Tape Library, VTL, and Cloud Storage upgrades
- Operating System updates

Expert Consultants and Proven Methodology

Veritas consultants team with customer stakeholders to guide a proven process (see Figure 1), resulting in a thorough assessment of their data protection environment and a complete set of recommendations addressing key challenges and changes necessary to achieve performance, efficiency and modernization goals.

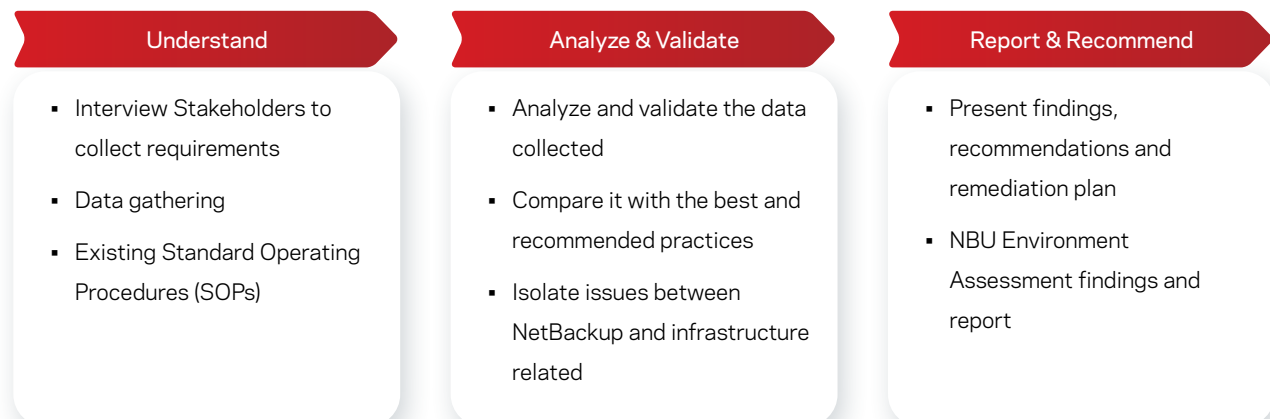

Figure 1. Veritas NetBackup Environment Assessment Engagement Process.

The expected activities and outcomes include:

- Baseline architecture and configuration snapshot of the current NetBackup domain
- Maturity level of the existing NetBackup environment with respect to health, performance, disaster recovery preparedness, cost reduction and potential for feature, architecture and technology modernization
- Validate and adhere to the customer's RPO and RTO standards
- Recommend solutions and best practices and identify NetBackup features and functions to help improve backup and restore performance, deduplication rates, backup methods, and recovery times
- Maximizing customer ROI by reporting and breaking down storage usage, bottlenecks and limitations

Complementing Services

Veritas provides a wide range of services to support information protection and resiliency needs throughout the operational lifecycle. These service offerings complement the NetBackup Environment Assessment:

- NetBackup Upgrade Service
- NetBackup Deployment Service
- NetBackup Catalog Migration and Manipulation Service
- NetBackup Release Management Service
- Information Visibility Assessment and Resiliency Planning Assessment
- Purpose Built Backup Appliance Deployment Service

About Veritas Services

Veritas Consulting, Education and Managed Services advise and empower organizations to harness their information with solutions to design, implement, optimize and operate Veritas applications and to advance Veritas knowledge and skills. Veritas Services help assure that data availability, insights and portability are tailored to suit the organization requirements, environment and operating needs of clients around the world.

About Veritas

Veritas Technologies is a global leader in data protection and availability. Over 80,000 customers—including 87 percent of the Fortune Global 500—rely on us to abstract IT complexity and simplify data management. The Veritas Enterprise Data Services Platform automates the protection and orchestrates the recovery of data everywhere it lives, ensures 24/7 availability of business-critical applications, and provides enterprises with the insights they need to comply with evolving data regulations. With a reputation for reliability at scale and a deployment model to fit any need, Veritas Enterprise Data Services Platform supports more than 800 different data sources, over 100 different operating systems, more than 1,400 storage targets, and more than 60 different cloud platforms.
